

Integrated Research Projects

Integrated Research Projects (IRPs) are the newest element of the U.S. Department of Energy's (DOE) Nuclear Energy University Program (NEUP). These projects are designed to provide R&D solutions that are most directly relevant to the near-term, significant needs of DOE-NE. These highly collaborative, university-led projects involve multiple colleges, industry, national laboratory, and international partners.

Since FY 2011, through NEUP, DOE has funded more than \$63 million in IRPs led by 12 U.S. colleges and universities.

In FY 2015, the following universities received IRP awards, totaling \$13 million:

Colorado School of Mines

Massachusetts Institute of Technology

Oregon State University

University of Mississippi

NEUP | Nuclear Energy
University Program
